

UWC International

CRM and Applications Platform Supplier Evaluation Demonstration and Presentation Briefing

1. Introduction

Thank you for your continued participation in the UWC International CRM and Applications Platform supplier evaluation. Following the assessment of written submissions, you have been shortlisted to attend a demonstration and presentation session.

This document provides the session agenda, the demonstration scenarios you are asked to prepare, and guidance on the presentation element of the session.

Please review this briefing carefully and prepare your demonstration and presentation accordingly. If you have any questions ahead of the session, please direct them to procurement@uwcio.uwc.org.

2. Session Agenda

Your session will last two hours and will follow the structure set out below. Suppliers are asked to manage their time within the allocated slots. The UWC International evaluation panel will be present throughout. The session will be recorded to allow panel members to review.

Time	Duration	Agenda Item	Detail
15:00 – 15:05	5 mins	Welcome and Introductions	UWC International panel introductions and confirmation of session format.
15:05 – 15:15	10 mins	Solution Overview	Brief overview of the proposed solution architecture and how it addresses UWC International's requirements.
15:15 – 16:15	60 mins	Scenario Demonstrations	Live demonstration of the platform against the predefined scenarios provided in this briefing (see Section 3).
16:15 – 16:45	30 mins	Implementation Approach and Delivery Plan	Presentation covering the proposed implementation methodology, project plan, key milestones, resourcing, risk management, and approach to achieving pilot delivery by October 2026.
16:45 – 17:00	15 mins	Questions and Discussion	Open discussion, including follow-up questions on technical topics, and an opportunity for the supplier to raise any clarification points.

Please note that the evaluation panel may ask questions during the demonstration to explore specific points. Time has also been reserved at the end of the session for broader discussion.

3. Demonstration Scenarios

3.1 Overview

The demonstration should be based on the scenarios set out below. These scenarios cover both the application and selection process and wider CRM capabilities, and are designed to allow suppliers to show how their platform handles key workflows, user roles, and data requirements.

Scenarios A to D focus on the applications and selection requirements. Scenarios E to G focus on wider CRM capabilities.

Suppliers are asked to:

- Prepare a live or interactive demonstration against each scenario using realistic sample data
- Walk through the scenario from the perspective of the user roles described
- Highlight any areas where the platform's approach differs from the scenario as described, explaining how the requirement would be met
- Note any configuration, customisation, or development that would be required to deliver the functionality shown

3.2 User Roles

The following user roles are referenced across the scenarios. Suppliers should demonstrate the platform from the perspective of these roles where relevant.

Role	Description
Applicant	A student (aged 15–17) applying for a two-year IB Diploma place at a UWC school. May be a minor requiring parental oversight.
Parent / Guardian	A parent or legal guardian who consents on behalf of a minor applicant, completes financial information, and monitors application progress.
NC Volunteer (Reviewer)	A volunteer selection committee member at a National Committee. Reviews applications, scores candidates, and records decisions.
NC Admin	A senior NC staff member or volunteer with administrative rights for their NC's programmes.
IO Admissions Staff	UWC International Office staff who manage the global process, including place allocations, clearing, and cross-NC oversight.
IO Super Admin	UWC International Office technical administrator with global configuration rights.
School Admissions Director	Staff at a UWC school who review nomination packs, accept or decline candidates, and manage school-level data.
IO CRM Administrator	UWC International Office staff responsible for managing CRM records, governance structures, and National Committee data.
IO Marketing Staff	UWC International Office marketing and communications staff responsible for campaigns, mailing lists, and applicant source tracking.

3.3 Scenarios

Scenario A: NC Administration, Permissions, and Programme Configuration

The NC Admin for a National Committee needs to configure their selection programme for the upcoming cycle, manage volunteer access, monitor application progress via a dashboard, and make a correction on behalf of an applicant who is unable to update their own record.

Suppliers should demonstrate:

- NC-level programme configuration (deadlines, stages, local questions)
- User and role management, including creating differentiated permission levels for reviewers, senior committee members, and a second NC Admin
- A real-time NC dashboard showing application volumes and pipeline status
- An NC Admin editing or correcting an applicant record on their behalf

- Unlocking a submitted application for amendment
- Role-based access in practice: from the perspective of a data protection lead, demonstrate what a contact record looks like for users across different teams, and how permissions are created and managed to ensure users see only information relevant to their role

What we are looking for: *Self-service administration capability for NCs, granularity of permissions, how record visibility differs across teams and roles, and the dashboard as a management tool.*

Scenario B: Applicant Registration, Eligibility, and Form Submission

A 16-year-old applicant in Brazil discovers the UWC programme, checks their eligibility, registers an account in Portuguese, and begins their application. As a minor, parental consent must be recorded before the application can proceed. The applicant completes all required fields and submits the application.

Suppliers should demonstrate:

- Branded entry point and applicant-facing landing page
- User registration and account creation workflow
- Parental or guardian consent capture for a minor applicant
- Application form presented in Portuguese, including a range of field types (text, date, dropdown, file upload)
- Save and resume functionality, allowing the applicant to return to a partially completed form
- Submission confirmation and status visibility for the applicant
- Applicant source and traffic tracking: from the perspective of the UWCIO marketing team, demonstrate how the platform tracks where applicants are coming from (e.g. advertising campaigns, referral links), what analytics are available for monitoring traffic sources, and how this data integrates with a marketing platform such as HubSpot to track an applicant's journey from awareness through to enrolment

What we are looking for: *Ease of use for a young applicant, language handling, parental consent as a gating step, the overall applicant experience, and the platform's ability to support marketing analytics and applicant source tracking.*

Scenario C: Multi-Stage Selection, Scoring, and Safeguarding

A selection committee volunteer reviews shortlisted candidates, scores them against defined criteria, flags a safeguarding concern on one application, and records an interview assessment. Reviewers must not see one another's scores until all reviews for a candidate are complete.

Suppliers should demonstrate:

- Assignment of applications to reviewers, including the ability for a reviewer to declare a conflict of interest
- A scored assessment form completed by a reviewer against defined criteria
- Blind review controls preventing visibility of other reviewers' scores until all assessments are submitted
- Raising a safeguarding or welfare flag on an application, including the workflow that follows
- Panel decision recording and progression of an applicant to the next stage

What we are looking for: *Robustness of the review and scoring workflow, blind review enforcement, and how safeguarding concerns are handled within the platform.*

Scenario D: Nomination, Place Allocation, and Pack Generation

IO Admissions Staff manage school place allocations across National Committees. An NC Admin generates a nomination pack for a selected candidate and nominates them to a specific school place. The School Admissions Director reviews and accepts or declines the nomination.

Suppliers should demonstrate:

- IO allocation of school places to NCs, including quota tracking
- NC Admin generation of a nomination pack (compiled application, references, assessments)
- Nomination of a candidate to a specific allocated place
- School Admissions Director view for reviewing and accepting or declining a nomination
- Tracking of nomination pack status (sent, reviewed, decision recorded)

What we are looking for: *End-to-end nomination workflow, pack completeness, and visibility across IO, NC, and school roles.*

Scenario E: Governance Structure and Body Management

UWC International manages a complex global governance structure comprising boards, committees, and advisory groups at both the international and national level. IO staff need to represent these governance bodies within the CRM, manage the membership and roles of individuals within them, and maintain records of appointments, terms of service, and organisational responsibilities.

Suppliers should demonstrate:

- Creating and configuring a governance body (e.g. the UWC International Board) with its type, purpose, and associated metadata
- Adding members to a governance body with defined roles (e.g. Chair, Trustee, Secretary), appointment dates, and term durations
- Viewing the current and historical membership of a governance body, including expired terms and past appointees
- Demonstrating a competency matrix for a governance group, showing the skills and expertise required on the group, which of these are currently covered by existing members, and where gaps remain
- A summary view or report showing all governance bodies, their membership status, and upcoming term expiries across the network

What we are looking for: *The platform's ability to model complex organisational structures, maintain accurate historical records of governance membership, support competency and skills gap analysis, and provide IO with visibility across the network.*

Scenario F: National Committee Management and Volunteer Oversight

UWC International works with over 150 National Committees worldwide. IO staff need to maintain a structured record of each NC, manage volunteer roles and training records, track MoU obligations, and have visibility of NC activity and health across the network.

Suppliers should demonstrate:

- A National Committee record showing key information: country, status, key contacts, and linked governance structure
- Managing NC volunteer records, including volunteer roles (e.g. NC Chair, Selection Coordinator), tenure, and links to the volunteer's person record in the CRM
- Recording and tracking volunteer training (e.g. safeguarding training), including training type, completion date, and expiry status
- Tracking MoU obligations for a National Committee, including linked MoU documents and obligation completion status
- An IO-level dashboard or report providing a summary view of NC health across the network, such as active volunteer counts, outstanding MoU items, and training compliance

What we are looking for: *How the CRM supports the management of a large, distributed volunteer network with appropriate structure, oversight, and reporting for IO.*

Scenario G: Communications, Mailing Lists, and Bulk Record Updates

CRM Capability – Communications and Contact Management

UWC International regularly communicates with contacts across its network, including donors, alumni, National Committee leaders, and partner organisations. The IO Communications team needs to create targeted mailing lists, send communications through an integrated email marketing platform, and ensure that records are updated to reflect what has been sent and to whom.

Suppliers should demonstrate:

- Creating a targeted mailing list based on contact attributes (e.g. all donors who have contributed in the last 12 months, or all NC Chairs)
- The integration between the CRM and an email marketing platform such as Mailchimp, including how the mailing list is synchronised and how a campaign is triggered
- After the email is sent (e.g. distributing the latest Impact Report), performing a bulk update to the communication records of all recipients so that the send is recorded against each contact
- Viewing the communication history for an individual contact, showing all outbound communications they have received
- Managing consent and communication preferences, including how opt-outs are respected in future mailings

What we are looking for: The quality of the integration with email marketing tools, ease of creating and managing mailing lists, how bulk record updates are handled, and the completeness of the communication history on individual records.

4. Presentation and Delivery Plan

Following the demonstration, suppliers are asked to present their proposed implementation approach and delivery plan. This presentation should last approximately 30 minutes and should address the following areas:

- Implementation methodology and key phases
- Proposed project plan and milestones, with specific reference to the pilot delivery target of October 2026 and full rollout by February 2027
- Team structure and resourcing, including any subcontractors or partner organisations
- Approach to data migration from the existing platform
- Training and change management strategy for UWC International staff, NC Admins, and volunteers
- Risk management approach, including key risks and proposed mitigations
- Ongoing support model post-implementation

The evaluation panel may also raise follow-up questions on the technical topics covered in the separate Technical Questions Briefing during this portion of the session or during the Questions and Discussion slot.

5. Technical Questions

A separate Technical Questions Briefing is provided alongside this document. This briefing sets out the technical and security topics that UWC International wishes to explore as part of the evaluation.

Suppliers are asked to provide a written response to each of the topics in the Technical Questions Briefing and return this ahead of the demonstration session, by Thursday 21st May.

The evaluation panel may ask follow-up questions on these topics during the session.

6. Practical Arrangements

- Sessions will be held via video conference. A calendar invitation with joining details will be sent separately.
- Suppliers should ensure that all presenters and demonstrators have tested their setup and screen-sharing in advance.
- The demonstration should use a live or sandbox environment with realistic sample data. Pre-recorded demonstrations are not acceptable. UWC International does not expect suppliers to present a fully configured solution; however, the environment must be configured sufficiently to demonstrate the concepts and workflows within each scenario.
- Any materials used during the session (presentation slides, handouts) should be shared with UWC International no later than 24 hours after the session.

7. Evaluation

The demonstration and presentation session carries a weighting of 10% within the overall evaluation model. The panel will assess:

- How effectively the platform addresses the predefined scenarios
- The quality and clarity of the proposed implementation and delivery plan
- The supplier's understanding of UWC International's requirements and operating context

- The depth and confidence of responses to panel questions

Scores will be recorded independently by each panel member and moderated following all supplier sessions.

8. Contact

If you have any questions regarding this briefing or the arrangements for the session, please contact:
procurement@uwcio.uwc.org

Please do not contact members of the evaluation panel directly.
